Dave Neita will excavate the deep riches of STEM subjects and explore the vast wealth of space with parents, students, teachers ... anyone with even an iota of interest in science. Dave has undertaken an astronaut leadership programme with US astronauts in the UK and has led space education tours for young people in the USA and in the UK. He will share his insights and disseminate information about further opportunities in the STEM industry. Dave is a poet and artist and will employ creativity in the symposium process to bring science and technology alive for the audience with his NASA (Neita's Aeronautics and Space Application) Methodology.

Professor Beverly Lindsay (Visiting Professor at the Institute of Education - London) will also share points from her ongoing National Science Foundation (NSF) research to encourage students to study STEM at the University levels.
